

WHAT IS CLAIMED IS:

1. A flame-retardant curable resin composition which comprises (1) a polymerizable vinyl monomer having a glass transition temperature of its homopolymer of at most 0°C, (2) a polymerization initiator, (3) a reducing agent and (4) a flame retardant in an amount of from 25 to 75 parts by mass based on 100 parts by mass of the total of (1) the polymerizable vinyl monomer having a glass transition temperature of its homopolymer of at most 0°C, (2) the polymerization initiator and (3) the reducing agent.
2. The flame-retardant curable resin composition according to Claim 1, which further comprises (5) a polymerizable vinyl monomer having a glass transition temperature of its homopolymer exceeding 0°C.
3. The flame-retardant curable resin composition according to Claim 1, which further comprises (6) an elastomer component.
4. The flame-retardant curable resin composition according to Claim 1, wherein (4) the flame retardant is ammonium polyphosphate.
5. The flame-retardant curable resin composition according to Claim 1, wherein the cured product has a storage elastic modulus of at most 1,500 MPa at a temperature of 23°C.
6. A two-pack type flame-retardant curable resin composition, wherein the components of the flame-

retardant curable resin composition as defined in Claim 1 are divided into first and second packs, the first pack contains at least (2) the polymerization initiator, and the second pack contains at least (3) the reducing agent.

- 5 7. A flame-retardant curable adhesive composition which consists of the flame-retardant curable resin composition as defined in Claim 1.
